**MOD. 1RT SL**

  
made in Italy

## MOD. 1RT SL

The **model 1RT SL** is entirely made in Italy by expert craftsmen: the body is made in shock-proof plastic material, covered by natural leather with contrasting stitches that point out the design and a metallic polished silver colored ring with convex lens in highly transparent glass. **It permits the recharge of an automatic wristwatch.**

The constant functioning is assured by a transformer to connect to the electrical grid (110-220 Volts), or by the use of two batteries 1,5 Volt type "D" LR20, placed in their lodging, that permits to put the winder in the safe or in the luggage if necessary.

These batteries, having a big capacity, feed a low consumption micro motor controlled by an electronic card realized for the Brand.

The circular movement is regulated by a rotating program suitably studied and developed according to the bases of the knowledge that regulate the functionality of the automatic wrist-watches. This program alternates running and pause hours, reversing also the rotating direction (clockwise or anticlockwise) and permitting in this way the recharge of all the watches in commerce.

The watch holder also is leather covered and may lodge watches with cases till 45mm diameter, with wrists from a minimum of 173 mm till 195 mm: this important extension is possible thanks to a regulation ring nut placed sideways on the holder itself.

## Characteristics:

- Shock-proof plastic material body.
- Natural leather covering.
- Toughened glass lens with metallic ring.
- Plastic watch holder covered in natural leather with catching chute-proof rubber wings.
- Size: base 116 mm, depth 139 mm, height 124 mm.
- Weight: 760 gr. (batteries excluded)
- Feeding: transformer 3V DC (included) or 2 batteries 1,5V "D" LR20 (not included).
- Feeding jack graft placed on the left side.
- Batteries lodging placed on the opening bottom.
- Automatic clockwise/anticlockwise rotation every 15 minutes aside from the position of the switch.
- Maximum dimension watch case lodged: 45 mm (hour regulation crown included), thickness negligible.
- Maximum/minimum dimension closed strap: 195/173 mm.

## Practical notes:

- Put in a dry spot.
- Take the batteries off if supplied by transformer.
- Do not insert or extract the watch holder when the rotor is moving.
- A right positioning of the watch holder is guaranteed after having heard a "click" further to a gentle pressure on the rubber wings during its own lodging.
- Avoid the manual rotation of the watch holder once placed in its housing.
- The watch rewinding occurs only if the rotor is rightly positioned on the base.
- If necessary, clean the rotor with a humid soft cloth, do not use any detergent.
